- Posters: A performance evaluation framework for IEEE 802.11 ad-hoc networks**
 Ping Chung Ng, Soung Chang Liew, Li Bin Jiang
 October 2004 **Proceedings of the 1st ACM international workshop on Performance evaluation of wireless ad hoc, sensor, and ubiquitous networks**
 Full text available: [pdf\(1214.93 KB\)](#) Additional information: full citation, abstract, references, index terms

Interferences in an ad-hoc network can be defined as a set of constraints that specify which groups of nodes cannot transmit simultaneously, and they have significant implications for the network capacity and other performance measures. This paper expounds the difference between two types of interferences: 1) physical interferences due to the receiver's inability to decode a signal when the powers received from other signals are large; and 2) protocol interferences imposed by the specific ...

- Deadlock detection is really cheap**
 Bin Jiang
 June 1988 **ACM SIGMOD Record**, Volume 17 Issue 2
 Full text available: [pdf\(503.22 KB\)](#) Additional information: full citation, abstract, citations, index terms

The treatment of deadlock has previously been considered as expensive, and implementations of the involved algorithm have appeared rather complex. In this paper a new algorithm for the treatment of deadlock is described. It is not only very efficient (in the worst case O(e) where e is the number of the edges in the "wait-for" graph) but also fairly simple. With this algorithm one can detect all deadlocks as soon as possible and list all participant ...
